Date:		
University of Florida Critical Care Medicine—Observed bedside point of care procedural ultrasound exam		
Ultrasound Trainee:		
Faculty:		
Have the ultrasound trainee perform the ultrasound examination and make a clinical assessment of the patient's condition (this can be done concurrently). Check the boxes labeled "Yes" or "No" as the student progresses. You may ask the trainee to perform the different exams and to make the clinical assessments listed; however, please do not coach the student or perform parts of the exam yourself.		
Note to examiner—patients in the ICU may be difficult or impossible to examine in one or more of the listed views. If the trainee understands proper probe placement and makes a good effort to see the appropriate structures, it should be considered a successful exam. Both sides of the patient should be examined.		
Did the trainee successfully:		
• Tell the patient what was going on?	$\Box YES$	□NO
• Identify the vein and the artery?	□YES	□NO
• Check the vein for compressibility?	□YES	□NO
• Determine best vein for cannulation?	$\Box YES$	\Box NO
• Identify guide wire in appropriate vein prior to dilation	$\Box YES$	□NO
• If appropriate, attempt lung ultrasound to confirm lung sliding?	□YES	□NO
• Appropriately clean patient/probe and replace on US machine?	$\Box YES$	□NO
If another procedure was performed:		
• Was the best spot to perform procedure done?	$\Box YES$	□NO
(pleural fluid identified and estimated quantity determined?)Appropriately clean patient/probe and replace on US machine?	□YES	□NO

I attest that the trainee successfully completed this observed ultrasound exam.
