TIP SHEET: <u>.USProcedural</u> (CPT 76937, 76942, 75989, 76930)

Indication: Procedural ultrasound to visualize for the following procedure: (central venous line, tube thoracostomy, lumbar puncture, etc)

Questions to ask yourself:

Artery AND Vein visualized: YES or NO

Compressible Vein: YES or NO

Access transduced to be vein prior to dilation: YES

or NO

Line confirmed in Vein with ultrasound (must have

image below): YES or NO

Optional: Evaluation of Pneumothorax: Seashore

sign or Stratosphere sign

Images to obtain:

Probe: High Frequency Linear Array

PROC1 – Vein and Artery visualized

PROC2 – Vein collapse image

PROC3 – Needle, short introducer catheter, or

guidewire in vein (preference needle)

PROC4 (Optional) – M-mode image showing

Seashore or Stratosphere sign

Scanning Tips:

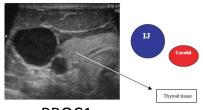

Tilt probe towards needle in short axis view

Remember to image the needle tip not the shaft

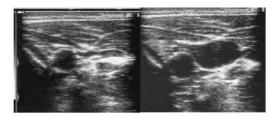

Be sure to check for depth of all structures

If trying long axis approach, remember if you lose needle tip, move the needle tip not the full view you already have of the vein

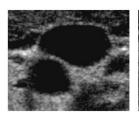

For tips on procedural lung ultrasound, please see lung tip sheet
