

Date: \_\_\_\_\_

**University of Florida Critical Care Medicine—Observed bedside point of care Lung exam**

Ultrasound Trainee: \_\_\_\_\_

Faculty: \_\_\_\_\_

Have the trainee perform the ultrasound examination and make a clinical assessment of the patient's condition (this can be done concurrently). Check the boxes labeled "Yes" or "No" as the student progresses. You may ask the trainee to perform the different exams and to make the clinical assessments listed; however, please do not coach the student or perform parts of the exam yourself.

**Note to examiner—patients in the ICU may be difficult or impossible to examine in one or more of the listed views. If the trainee understands proper probe placement and makes a good effort to see the appropriate structures, it should be considered a successful exam. Obviously, both lungs should be examined.**

Did the trainee successfully:

- Tell the patient what was going on?  YES  NO
- Examine the anterior intercostal spaces?  YES  NO
- Examine the lateral intercostal spaces?  YES  NO
- Identify the presence or absence of A-lines?  YES  NO
- Identify the presence or absence of B-lines?  YES  NO
- Assess the presence or absence of a pneumothorax?  YES  NO
- Assess the presence or absence of pulmonary edema?  YES  NO
- Assess the presence or absence of alveolar consolidations?  YES  NO
- Assess the presence or absence of pleural effusions?  YES  NO
- Make an accurate description of the pleural fluid?  
(anechoic, septated, echogenic)  YES  NO
- Appropriately clean patient/probe and replace on US machine?  YES  NO

I attest that the ultrasound trainee successfully completed this observed ultrasound exam.
